Publishing models for scholarly journals

- Traditional (subscription) model
- Hybrid open-access
- Platinum open-access = free to author, free to reader
- Delayed open access = subscription model but OA after some time
- Gold open access = free to reader, author pays a fee

Predatory Publishers and Journals

- Predatory publishers (journals) are those that exploit the gold open-access model for their own profit
- They take advantage of, exploit, and pander to scholarly authors
- They pretend to be legitimate, copying established and respected journals' websites and practices
- Many do a poor or fake peer review
- Some name themselves as "Institutes," "Associations," or "Centers"
- Some operate as single mega-journals

Chief Characteristics of Predatory Journals

1. The use deception (they don't tell the truth)
2. They are not transparent
3. They do not follow scholarly publishing industry standards and best practices

International Journal of Innovative Technology and Research

(IJITR - ISSN 2320 –5547)

Impact Factor 1.3064

Invites original research paper in all Engineering Discipline subjects for

Volume-3, ISSUE-4, June – July 2015

Paper Submission DETAILS:

Online submission (recommended) by signing in / register as author

***(Click new submission to upload your paper by following the instruction)
or***

Submit the article to chiefeditor@ijitr.com, chiefeditorijitr@gmail.com

Deadline for submitting manuscript: 15th July 2015

Review result: within 7 days of submission

Publication of Vol. 3, Issue 4 : 30th July 2015.

**PUBLICATION FEE IS RS.2100/- ONLY for Indian Author and 60\$ for Foreign author
(Which includes a certificate)**

Published paper will be indexed in numerous search engines worldwide like
Google, Yahoo, computer science directory, scribed and many more.

Visit our website register and log in as a author to submit your manuscript online

We apologies if you have received multiple mails

IJITR

International Journal of Innovative Technology and Research is a bimonthly peer reviewed Open access Journal which publish Original research work world wide. The journal welcomes publications of high quality papers on theoretical developments and practical applications in computer science. Original research papers, state-of-the-art reviews, and high quality technical notes are invited for publications.

Impact Factor 4.236

Welcome to IJARSET!

International Journal of Advanced Research in Science, Engineering and Technology (IJARSET) is an open access, international, peer-reviewed, monthly journal, dedicated to serve the society by quality research work. The journal aims at promoting innovative research in various disciplines of Science, Engineering and Technology. IJARSET invites authors to submit original and unpublished work in terms of written reviews, short communications and notes dealing with numerous disciplines that communicates current research.

Frequency : 12 Issues per Year

Subject Category : Science, Engineering and Technology

CALL FOR PAPERS

Vol. 4, Issue 6, June 2017 **NEW!**

Paper Submission : 25th Jun 2017

Author Notification : within 5 days

Journal Publication : 30th Jun 2017

History of predatory publishers

- I first started to receive spam email solicitations from publishers in 2008 and 2009
- My first publication about a predatory publisher was in 2009
- I coined the term "predatory publisher" in summer 2010
- I started my current blog in early 2012
- Not all open-access journals are predatory

Predatory Journals and Academic Evaluation [1]

- Universities use scholarly publications as a measure of academic achievement
- Academic managers want objective evaluation methods: lists, bibliometrics
- Scholarly publishing has changed, but evaluation systems have not changed
- It is very easy now to get an article published in an OA journal
- Evaluation systems based on counting are no longer valid
- Some researchers take advantage of easy publishing

Predatory Journals and Academic Evaluation [2]

- At many universities, academic evaluation is broken
- If you use a whitelist, many seek out the list's "easiest" journals
- Researchers who publish in top journals feel cheated

Diagnostic Aide

Austin Journal of Dermatology

Abstract: Molluscum Contagiosum (MC) is a viral infection of the epidermal keratinocytes that results in a skin lesion with characteristic intracytoplasmic inclusions caused by pox virus. This common disease is confined to the skin and mucous membranes and produces benign, self limited, multiple umbilicated papular eruptions [1].

Spontaneous Bone Regeneration of the Mandible: In a Case of Osteosarcoma and Literature Review

Abstract: There are rare cases reported in the literature that have demonstrated spontaneous bone regeneration after resection

OA Megajournals Running Out of Unique Titles, Now Using Dumb Ones

International Journal of Precious Engineering Research and Applications
ISSN: 2456-2734
Pointing Your Research To Right Direction....
Just precious.

There are so many megajournals being published now that they are running out of unique titles. I mean, there is a finite number of ways that you can re-arrange terms such as *Science, Engineering, Research, Advanced*, and *Contemporary* to create new and unique journal titles.

RECENT POSTS

How predatory publishers damage science [1]

- They've increased published research misconduct (mala conducta en la investigación), such as plagiarism
- The pseudo-science they publish gets indexed in Google Scholar and other academic indexes
- They threaten demarcation, the division between science and pseudo-science, the cumulative nature of research (naturaleza cumulative de la investigación)
- They feed bogus research to societal institutions that depend on authentic science
- They publish activist science and conspiracy-theory science (ciencia de teoría de la conspiración)

How predatory publishers damage science [2]

- They are polluting taxonomy
- Many also sponsor bogus scholarly conferences
- Pharmaceutical entrepreneurs are using predatory publishers to make invented compounds appear efficacious
- Author fees (tasas de publicación) may prevent some authors from being able to publish their work, especially those in middle-income countries and unaffiliated researchers

Indirect Victims of Predatory Publishers

- Those who are inundated with spam
- Those preparing literature reviews
- Those preparing review articles and systematic reviews, and meta-analyses
- Those who take the high road, only to see colleagues advance academically through high numbers of publications in predatory journals
- Students preparing class papers

30 Ko

Saussurea est le journal de la Société botanique de Genève.

Il comporte les rubriques suivantes :

- **Notre Société** : relate la vie de la Société botanique de Genève.
- **Presse** : présente les nouvelles régionales et internationales sur la botanique
- **Découverte** : articles de vulgarisation scientifique.
- **Synthèse** : décrit un thème de recherche en permettant de comprendre son contexte et ses enjeux.
- **Recherche** : articles scientifiques originaux et expertisés dans le domaine de la botanique et de la mycologie.
- **Pratique** : fournit des informations pratiques sur des livres, des sites web, des associations, etc.
- **Agenda** : calendrier des principales manifestations botaniques locales et régionales.

Science

“Since science is our most reliable source of knowledge, in a wide variety of areas, we need to distinguish scientific knowledge from its look-alikes.”

—S.O. Hansson.

Conclusion

- The author-pays model is a major cultural change in scholarly publishing that has led to the creation of many scams
- We have given up on selectivity in scholarly publishing
- Predatory journals threaten the integrity of science
- Scholarly authors are now consumers of publishing services, but there's no organization that looks out for their interests

Thank you
